WINDWARD ENGINE

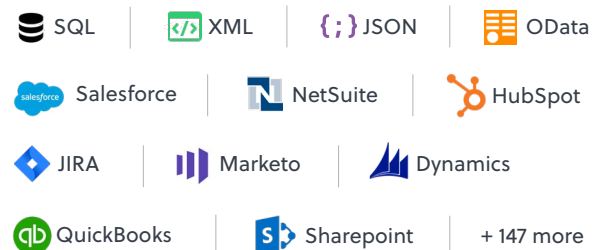

Drop-In Embedded Code for Seamless Integration

Windward Studios' document generation software is designed to be integrated with virtually any application. The Windward solution consists of an easy-to-use free-form Template Designer and powerful Engine that connects your data and document templates for high-performance output. Windward's Engine is a set of code libraries that can be integrated with your existing applications by copy/pasting a few lines of code.

Security

Windward easily integrates with your existing security structure, allowing for ease of integration and maintenance. You can start working with the product without any additional security setup.
